

Lesson 36 Perimeter and Area

Perimeter: is the length of a closed line that corresponds to the boundary of a plane figure.

units of length??

Area: is the measure of the surface defined by a figure.

units squared??

Conversion

Kilo	Hecto	Deca	Unit	Deci	Centi	Milli
km	hm	dam	Meter	dm	cm	mm
kl	hl	dal	Liter	dl	cl	ml
kg	hg	dag	Grams	dg	cg	mg

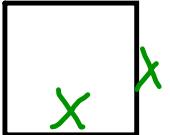

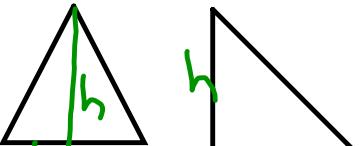

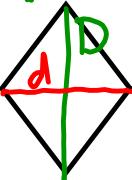

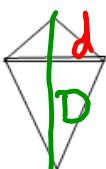

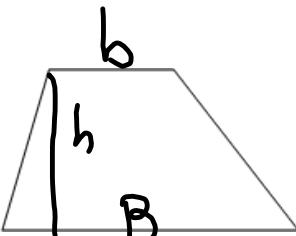

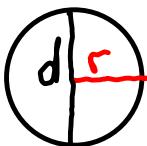

Square Units (for area) km^2 hm^2 dam^2 m^2 dm^2 cm^2 mm^2

$\times 10$ $\div 10$
 $\times 100$ $\div 100$

Choice of Unit of Measure for Area

Name of area unit	Symbol	Example of appropriate context
Square kilometre	km^2	Area of 100 soccer fields
Square hectometre	hm^2	Area of one soccer field
Square decametre	dam^2	Area of half a tennis court
Square metre	m^2	Area of the work surface of a classroom desk
Square decimetre	dm^2	Area of the palm of a hand
Square centimetre	cm^2	Area of this square: <input type="text"/>
Square millimetre	mm^2	Area of this square: <input type="text"/>

Formulas

	AREA	PERIMETER	
SQUARE		$A = X^2$	$P = 4X$
RECTANGLE		$A = L \times W$	$P = 2L + 2W$
PARALLELOGRAM		$A = b \times h$	$P = 2b + 2s$
TRIANGLE		$A = \frac{b \times h}{2}$	$P = \begin{cases} \text{add} \\ \text{all 3 sides} \end{cases}$
RHOMBUS		$A = \frac{D \times d}{2}$	$P = \begin{cases} \text{add} \\ \text{all 4 sides} \end{cases}$
KITE		$A = \frac{D \times d}{2}$	$P = \begin{cases} \text{add} \\ \text{all 4 sides} \end{cases}$
TRAPEZOID		$A = \frac{(B+b)h}{2}$	$P = \begin{cases} \text{add all} \\ \text{4 sides} \end{cases}$
CIRCLE		$A = \pi r^2$	$P = 2\pi r$ OR πd

Solving Equations working backFinding the value of the variable is the solution

$$\boxed{A = 48} \quad ? \quad A = L \times W$$

~~$\frac{48}{12} = \cancel{12} \times W$~~

$4 = W$

$$\boxed{A = 64} \quad ? \quad A = X^2$$

$\sqrt{64} = \sqrt{X^2}$

$8 = X$

$$\begin{array}{l} \text{20} \\ \text{---} \\ b? \end{array} \quad A = 142 \quad A = b \cdot h$$

$$\begin{array}{l} h? \\ \text{---} \\ 7 \end{array} \quad A = 9 \quad \frac{142}{20} = b \times \cancel{20}$$

$7.1 = b$

$$\begin{array}{l} ? \\ \text{---} \\ 12 \end{array} \quad A = 132 \quad A = \frac{b \times h}{2}$$

** work below*

$$\begin{array}{l} h? \\ \text{---} \\ 5.2 \end{array} \quad A = 45 \quad \frac{9 \times 2}{7} = h$$

** work below*

$2.57 = h$

$$\begin{array}{l} D? \\ \text{---} \\ 12 \end{array} \quad A = 132 \quad A = \frac{D \times d}{2}$$

$132 = \frac{D \times 12}{2}$

$$\frac{132 \times 2}{12} = D$$

$22 = D$

$$\begin{array}{l} 5.2 \\ h \\ \text{---} \\ 9.8 \end{array} \quad A = 45 \quad A = \frac{(B+b)h}{2}$$

$$45 = \frac{(5.2 + 9.8)h}{2}$$

$$45 = \frac{(15)h}{2}$$

$$\frac{45 \times 2}{15} = h$$
